Neelima Krishnan

About Intel

Intel creates the breakthrough technologies that make amazing experiences possible. As the world's leading silicon provider and top contributor to the Linux kernel, Intel continually advances how people work and live.

For over two decades, Intel's contributions to open-source projects—from deeply embedded products to massively complex data centers have helped ensure that a breadth of solutions run exceptionally well on Intel® architecture. The combination of consistent innovation and dedicated execution has helped unlock business opportunities, connect people, and enhance lives. Open source is bringing amazing experiences to life and Intel is proud to help make those experiences possible.

About WWCode Portland

Women Who Code is dedicated to **INSPIRING** women to **EXCEL** in technology careers.
